- Our company was founded in 1972, so we can say that it was a pioneer in the leather district.

We are specialized in the tannage of calf and bovine leather for leather goods, handbags and footwear, for the luxury market and not only, combining artisan know-how with sophisticated technology, attention to the choice of raw materials and personally following all the phases of processing which characterize the "made in Italy" brand.

The main prerogatives of the company are the following:

- the guarantee of long lasting quality
- continuous technical-stylistic innovation
- machinery suitable for the safety of its workers
- seriousness and experience of the company that has been present on markets all over the world for over forty years
- attention to the environment is one of the main objectives

The quality comes from a monthly production of 40,000 M2 of leather, from the careful work of 26 employees and from an accurate quality control system

SUSTAINABILITY

In our processes, both for metal free and traditional tanning items, we have involved our entire supply chain in a rigid sustainability program.

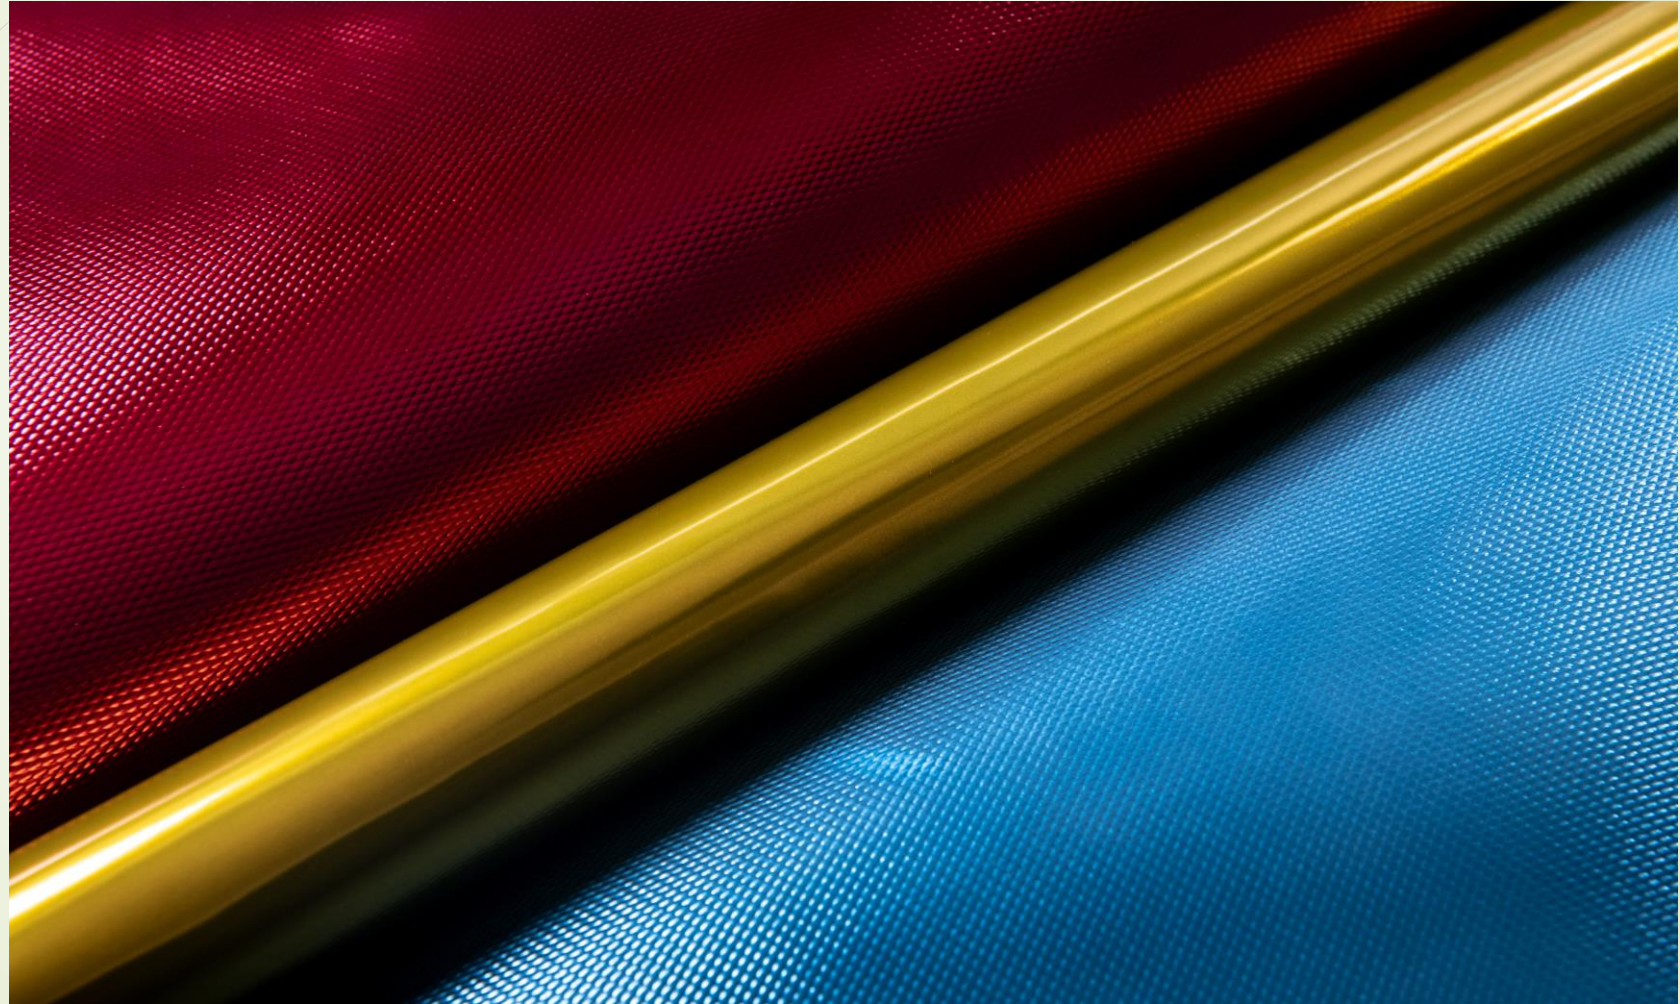

In all our productions we have control of all processes and of all chemical substances in restriction, guaranteeing customers skins with high environmental sustainability and traceability
